DSA03-Natural Language Processing

List of Lab Program

1. Write program demonstrates how to use regular expressions in Python to match and search for

patterns in text.

PROGRAM

```
import re

text = "Hello, my phone number is 9876543210"
print(re.match("Hello", text).group())
result = re.search(r"\d{10}", text)
print(result.group())
```

OUTPUT
