DSA03-Natural Language Processing

List of Lab Program

4. Implement a finite-state machine for morphological parsing. In this example, we create a simple machine to generate plural forms of English nouns using python.

PROGRAM

```
def plural(noun):
    if noun.endswith(('s', 'x', 'ch', 'sh')):
        return noun + 'es'
    elif noun.endswith('y'):
        return noun[:-1] + 'ies'
    else:
        return noun + 's'

noun = input("Enter a noun: ")
print("Plural form:", plural(noun))
```

OUTPUT
